Subject: FW: Data on usage

Wayne,

Update from the GA below.
Hopefully it helps.

Subject: RE: Data on usage

Brent:

There is unfortunately no definitive answer. The number we like to use is over 90% of interior walls across all sectors of construction (obviously residential is virtually 100% and industrial much lower) are made of gypsum panels.

Cheers!

Subject: Data on usage

Michael,

Hope all is well. Looking forward to our upcoming call.

I have a quick question relating to gypsum usage in construction and I am not sure if you can help. I wish to know if there is any data indicating the % of interior walls having gypsum as part of their composition.

I know that it is a high % but am curious if anything is documented in this regard.

Please advise.

Thanks
