MARCH 01, 2012

Tenaris announced on March 1, 2012 that it has purchased from Cameron International the plant, equipment and other assets related to Cameron's sucker rod business located in Campina, Romania.

The Campina rods mill has a capacity of 500,000 units/year and a workforce of around 60 people. The facility will continue its operation and all its employees will now join Tenaris.

Through this acquisition, Tenaris will strengthen its presence in Romania, where it currently has a seamless tubes mill located in Zalau, a steel mill in Calarasi and a service center in Ploiesti.

With sucker rods manufacturing centers located in Villa Mercedes (Argentina), Pindamonhangaba (Brazil) and Veracruz (Mexico), this acquisition will increase Tenaris's current rods production capacity by approximately 20%, enabling the company to consolidate its global presence and expand its sucker rods business in the European and Middle Eastern markets, optimizing delivery times and enhancing flexibility.

"Through the new facility in Campina, Tenaris will be ready to meet the growing demand of our customers in Europe and the Middle East. With sucker rods manufacturing centers in four regions, Tenaris will be able to comply with customers' demands with more flexibility from our facilities in North America, Central America, South America and, now, also from Europe," said Alejandro Levrino, Tenaris Sucker Rods Division Director.
